

The Significant Role of Information in Preventing the Psychological Problems of Covid-19 Pandemic

Alireza Atarodi* , Hamidreza Atarodi

Background

Information is the base of knowing, something that people use based on the source they choose and apply it to make an understanding and a sense of their lives and the world. Information is an aid, a positive and fast help in decision making, needed for policy makers, decision makers, managers and all the others to behave based on information far from ignorance. Information generates new information to make knowledge that helps in generating science and wisdom through new theories, analysis and discourses approaching peace, security, development and health, but true and positive information makes a better psychological status and world when we are faced with Covid-19 crisis. We aimed to survey The Significant Role of Information in Preventing the Psychological Problems of Covid-19 Pandemic.

Method

It is a short communication that was conducted by using and searching on data banks and information resources related to the subject from the necessary texts the subject of research. Since this is a simple review, No methodology was used to be explained. It is an opinion.

Results

We need information, it make us aware of the situation and the risks to put the life in its good running order and far from dangers and harms. Information form us based on the kind, type and so many factors it reach us and it can then, make us change our behavior and beliefs to make another idea. When we learn something we are out of the past and behavior we had before, we leave it, modify or put away that of before, a result of transmitting and getting information, what is needed for a human being mostly to live better next. To give and receive, information exchange is vital for survival and it is one of the human rights to be free to use it globally and comprehensively. The role of information is important in eradication of disease in a way that would be easier, faster with low cost or economically useful and on the benefit of the human, considering right and reliable, valid, not being fake and false, more stable and beneficial to all. To know the source of information, type and the correctness of it is so important and more is to understand these types and to know what type is appropriate for your work prior to searching for information to use.

Conclusion

We should take and get the needed information truly, in right time from right sources and follow them correctly waiting for a secure, stable and credible immunity. It also should be considered to explore to what extent Covid-19-related fake news are popular and in access in social media and have a program to control and direct them in a way it should be. Source and aim analyses is suggested to know how to deal with communication media to reduce the fake news problems and ambiguity status, since it may help the pertinent policymaking as well to make better and effective decisions for solving the problems and face the challenges and unexpected crisis more easily, fast and effectively.
