مدلاین

MEDLINE چیست؟

■ پایگاه اطلاعاتی حوزه پزشکی حاوی بیش از 24 میلیون مقاله از 1948 میلادی تاکنون

■ قابل دسترس به طور رایگان در محیط اینترنت

■ مقاله های بیش از 5600 مجله تخصصی معتبر منتشر شده در آمریکا و هفتاد کشور جهان

در موضوعات مختلف حوزه های پزشکی / دندانپزشکی / علوم پایه / پرستاری و

مامایی / دامپزشکی و پیراپزشکی

■ 85% مقاله ها به زبان انگلیسی

■ 75% مقاله ها خلاصه هم دارند.

PUBMED چیست ؟

• محیطی که به شما امکان جستجو و یافتن مقاله های پایگاه اطلاعاتی **MedLine** را می دهد .

• بطور رایگان در دسترس کلیه کاربران اینترنت است و روزانه 3.2 میلیون دفعه جستجو در آن انجام می شود .

• تولید کننده آن مرکز ملی اطلاعات بیوتکنولوژی **NCBI** وابسته به کتابخانه ملی پزشکی آمریکاست .

• این مرکز پایگاههای اطلاعاتی دیگری نیز تولید می کند که از طریق این محیط محتوای آنها قابل جستجو می باشد .

چگونه می توان در مدلاین جستجو کرد؟

- تعیین استراتژی جستجو

قبل از شروع جستجو در مدلاین بایستی مفهوم یا مفاهیم مرتبط با موضوع مورد جستجو تعیین شوند.

موضوع تحقیق: اثرات سیگار بر ناهنجاریهای جنینی

مفاهیم:

**smoking/cigarette/tobacco/nicotine/fetus/
abnormalities/birth defects...**

2. با تعیین مفاهیم می توانید واژه های کلیدی یعنی موضوعهای اصلی و فرعی خود را برای جستجو انتخاب کنید.

3. سپس با توجه به امکانات جستجوی مدلاین واژه های کلیدی را ترکیب می کنیم.

انواع روشهای جستجوی مدلاین در PubMed

- جستجوی ساده يك واژه
- جستجوی ترکیبی واژه ها با استفاده از **AND/OR/NOT**
- جستجوی واژه در عنوان / نویسنده / چکیده مقاله / ...
- جستجوی واژه های مورد نظر شما در اصطلاحنامه استاندارد پزشکی **MeSH**
- جستجو مجله مورد نظر شما در پایگاه اطلاعاتی مجلات **Journals Database**

شیوه های انتخاب و جستجوی واژه

- در جستجوی ساده واژه ای که برای توصیف موضوع تحقیق بکار می برید، همان واژه کلیدی شماست. مانند **headache** یا **pregnancy**
- ممکن است به دو یا چندین واژه جهت توصیف موضوع نیاز داشته باشید، مانند **headache** و **Aspirin**
- در این صورت برای ترکیب دو واژه از کلماتی مانند **AND/ OR/ NOT** که به عنوان اپراتورهای منطقی معروفند، استفاده کنید. مثال:
headache AND pregnancy
- برای جستجوی يك عبارت از گیومه استفاده کنید. مثال:
“radiation injuries”

در مورد دوم، دو واژه در کنار هم جستجو می شوند ▪

نکته

عملگرهای بولی

Pregnancy AND smoking

در این مثال به مقالاتی نیاز است که هر دو واژه در یک مقاله باشد.

Diet OR nutrition

در این مثال به مقالاتی نیاز است که هریک از واژه ها را شامل شود.

Cancer NOT child

در این مثال جستجو تنها شامل کلمه اول است و کلمه
بعدی از نتایج حذف می شود.

یک یا دو واژه را در محل مخصوص تایپ کنید
سپس دگمه **search** را کلیک کنید.

1. The impact of preoperative information on state anxiety, postoperative pain and satisfaction with pain management.

Sjöling M, Nordahl G, Olofsson N, Asplund K.

Department of Nursing and Health Sciences, Mid-Sweden University, Sundsvall, Sweden. mats.sjoling@mh.se

Abstract

The primary objective of this study was to test whether specific information given prior to surgery can obtain better pain relief after total knee arthroplasty (TKA). Secondary objectives were to study the impact of preoperative information on state and trait anxiety, satisfaction with pain management and satisfaction with nursing care. The study was an intervention study with two groups of equal size (n=30). The intervention group was given specific information while the control group received routine information. Pain assessment was made preoperatively and every 3h for the first three postoperative days, using the visual analogue scale. Results of this study suggest that information does influence the experience of pain after surgery and psychological factors. The postoperative pain declined more rapidly for patients in the treatment group and preoperative state anxiety was lower and they were more satisfied with the postoperative pain management.

2. Clinical vocabularies and terminologies: impact on the future of health information management.

Fenton SH.

Department of Health Information Management, St. Scholastica's College of St. Scholastica, Duluth, Minnesota, USA

Abstract

As standardized clinical vocabularies and terminologies are being developed, Health Information Management (HIM) practitioners are faced with the challenge of understanding and coding systems beyond the ICD-9-CM and CPT. The limited scope of these classifications prevents them from serving as the standard for the computer-based patient record. The American Health Information Management Association (AHIMA) Coding Futures Task Force provided insights into the knowledge and skills that HIM professionals will need. As clinical vocabularies and terminologies become more integrated into health care systems. Certain clinical vocabularies are important in a clinical vocabulary and several clinical vocabularies are in use today.

3. Evaluation of computerized health management information system for primary health care in rural India.

Krishnan A, Nongkynrih B, Yadav K, Singh S, Gupta V.

Centre for Community Medicine, All India Institute of Medical Sciences, New Delhi, India.

Abstract

BACKGROUND: The Comprehensive Rural Health Services Project Ballabgarh, run by All India Institute of Medical Sciences (AIIMS), New Delhi has a computerized Health Management Information System (HMIS) since 1988. The HMIS at Ballabgarh has undergone evolution and is currently in its third version which uses generic and open source software. This study was conducted to evaluate the effectiveness of a computerized Health Management Information System in rural health system in India.

METHODS: The data for evaluation were collected by in-depth interviews of the stakeholders i.e. program managers (authors) and health workers. Health Workers from AIIMS and Non-AIIMS Primary Health Centers were interviewed to compare the manual with computerized HMIS. A cost comparison between the two methods was carried out based on market costs. The resource utilization for both manual and computerized HMIS was identified based on workers' interviews.

RESULTS: There have been no major hardware problems in use of computerized HMIS. More than 95% of data was found to be accurate. Health workers acknowledge the usefulness of HMIS in service delivery, data storage, generation of workplans and reports. For program managers, it provides a better tool for monitoring and supervision and data management. The initial cost incurred in computerization of two Primary Health Centers was estimated to be Indian National Rupee (INR) 1674,217 (USD 35,622). Equivalent annual incremental cost of capital items was estimated as INR 198,017 (USD 4213). The annual savings is around INR 894,283 (USD 11,924).

CONCLUSION: The major advantage of computerization has been in saving of time of health workers in record keeping and report generation. The initial capital costs of computerization can be recovered within two years of implementation if the system is fully operational. Computerization has enabled implementation of a good system for service delivery, monitoring and supervision.

MeSH Database

تعريف و کاربرد اصطلاحنامه

اصطلاحنامه معادل فارسي تزاروس از ریشه يوناني **treasury**

مجموعه اي از واژه هاي رایج و معتبر در يك يا چند رشته علمي كه علاوه بر نظم الفبائي داراي ساختار سلسله مراتبي نیز است.

انواع روابط بين واژه ها (مترادفها / مرتبط ها / اعم و اخص) در اين مجموعه ارائه مي شود .
شما را از يك اصطلاح غير رایج و غير علمي به اصطلاح گزيده و معتبر آن هدايت مي كند. مثال

cancer See Neoplasm

بطور مستمر ویرایش و روزآمد می شود .

کلید يك جستجوي دقيق در محتوای مقالات پایگاههای اطلاعاتي مانند مدلاین است .

اصطلاحنامه استاندارد پزشکی MeSH

- **MeSH** وسیله ای توانا و مفید در پژوهشهای پزشکی است و همانگونه که از نام آن بر می آید مجموعه ای از اصطلاحات معتبر و استاندارد حوزه پزشکی و رشته های وابسته به آن است. (بیش از 19000 اصطلاح)
- مشخصات هر مقاله به همراه اختصاصی ترین موضوع یا موضوعهای آن (**keywords**) وارد پایگاه اطلاعاتی مدلاین می شود و مجموع این واژه های کلیدی در این اصطلاحنامه بصورت الفبایی تنظیم و عرضه می شوند.
- این اصطلاحنامه به شما کمک می کند که اصطلاحهای استاندارد و ارجح حوزه پزشکی را بشناسید.
- با استفاده از این اصطلاحنامه می توانید مناسبترین واژه را برای جستجوی خود در پایگاه اطلاعاتی مدلاین و حتی در دیگر موتورهای جستجوی اینترنت بیابید.

MeSH Database link?

The screenshot shows the PubMed home page in a Windows Internet Explorer browser window. The address bar displays <http://www.ncbi.nlm.nih.gov/pubmed/>. The page features a search bar with a dropdown menu open, listing various databases. The 'MeSH' option is highlighted in blue. Two blue arrows originate from the title 'MeSH Database link?': one points to the 'MeSH' option in the search dropdown, and the other points to the 'MeSH Database' link in the 'More Resources' section.

MeSH is the U.S. National Library of Medicine's controlled vocabulary used for indexing articles for MEDLINE/PubMed. MeSH terminology provides a consistent way to retrieve information that may use different terminology for the same concepts.

- Use the MeSH database to find Medical Subject Heading Terms and build a search strategy.

سرعنوانهای موضوعی اصلی MeSH به همراه تعریف آن

The screenshot shows the MeSH (Medical Subject Headings) website in a Windows Internet Explorer browser. The address bar shows the URL <http://www.ncbi.nlm.nih.gov/mesh>. The search bar contains the text "hematology" and the "Go" button is highlighted. The search results show three items:

- 1: Hematology**
A subspecialty of internal medicine concerned with morphology, physiology, and pathology of the blood and blood-forming tissues.
- 2: AIEOP protocol 8202 [Substance Name]**
chemotherapy protocol consisting of above cpds; used in treatment of acute lymphoblastic leukemia (ALL) in children with cystic fibrosis
Date introduced: February 10, 1993
- 3: Protein S Deficiency**
An autosomal dominant disorder showing decreased levels of plasma protein S antigen or activity, associated with venous thrombosis and pulmonary embolism. PROTEIN S is a vitamin K-dependent plasma protein that inhibits blood clotting by serving as a cofactor for activated PROTEIN C (also a vitamin K-dependent protein), and the clinical manifestations of its deficiency are virtually identical to those of protein C deficiency. Treatment with heparin for acute thrombotic processes is usually followed by maintenance administration of coumarin drugs for the prevention of recurrent thrombosis. (From Harrison's Principles of Internal Medicine, 12th ed, p1511; Wintrobe's Clinical Hematology, 9th ed, p1523)

The browser's taskbar at the bottom shows several open applications, including "Search Results", "مدل‌های جدید", "Mohsen Shirazi Me...", "hematology - MeS...", and "MeSH Home - Win...". The system clock shows 5:25 PM.

[Copyright Notice](#) [Cite this Page](#)

[Hardcopy Version at National Academies Press](#)

Excerpt

This report addresses a broad spectrum of health applications in an attempt to demonstrate the diversity of needs and the degree of commonality in the technical capabilities they require. It is intended to guide a faster realization of the Internet's potential for health, a potential that has eluded the health sector for too long. The report recognizes that the applications themselves—and the technical capabilities they demand—are moving targets with uncertain trajectories. While today's demonstration programs hint at the kinds of capabilities that will be needed in the future, the evolutionary path of health applications of the Internet is unclear. Will, for instance, remote medical consultations become viable between any patient and any care provider connected to the Internet, or will this capability remain more localized in its reach and limited to patients and providers in the same health plan? The answer depends on technical, economic, social, and policy considerations that are difficult to predict, and different answers could drive the need for significantly different technical capabilities, as well as a different scale and scope of deployment. The report attempts to recognize these uncertainties and to derive conclusions that are reflective and cognizant of them.
